

## Mission Statement

**“The Medical Manufacturing (MM) industry sector is a grouping within Swissmem and deals with matters of common interest in technology, business and politics: We strengthen the expansion of the relationship and information network of our members, arrange contacts with universities and research institutions, maintain the reputation of the industry in the public eye, provide services for members and partners and promote cooperation with other industry sectors and bodies in Switzerland and abroad.”**

### Who are we?

Any industrial partner from Switzerland and Liechtenstein who is a member of Swissmem and is active as a supplier or distributor in the medtech sector can join the Swissmem Medical Manufacturing Industry Sector. The members of SIS Medical Manufacturing are particularly active in areas such as manufacturing technology and processes, machines and tools for the production of implants, prostheses, surgical instruments and medical devices as well as medical disposables, or in the field of laboratory automation. Regulatory aspects and digitalisation play an important overriding role here.

### What do we want to achieve?

**SIS Medical Manufacturing** bundles and coordinates the common interests of its members and represents them vis-à-vis stakeholders in business, science, politics and the public. We support the Swiss medtech industry in the research, development, production and commercialisation of high-performance technologies and products in Switzerland and abroad. In particular, it promotes the use of new manufacturing technologies and digitalisation strategies through lectures and workshops and networks its members with other industry sectors and partners to provide access to the latest technologies, methods and processes and thus mutually benefit from know-how and promote innovation.

The industry sector

- is also committed to emphasising sustainability and environmental aspects and promotes environmentally friendly production processes.
- actively monitors trends and regularly reports on successes and developments in the industry.
- is committed to future-oriented training and industry-friendly regulatory conditions in order to ensure the future viability and competitiveness of the medical technology sector in Switzerland and Liechtenstein.

### What do we do?

SIS Medical Manufacturing maintains a regular exchange of information between its members and represents their interests vis-à-vis national and international bodies. We organise networking and information events, promote cooperation between industry and universities and support the networking of SIS Medical Manufacturing with other industrial sectors at Swissmem in order to exploit synergies in various production technologies.

The SIS co-operates with Swiss MedTech in synergetic topics and fields of interest.
